Database Search Continued:

- So, go to databases A–Z
- Click P for ProQuest
- You can search for anything in this database.
ProQuest Database:
Notice we get 2,768,259 results. We can narrow the search by hitting the Peer Reviewed button.

By narrowing down with Peer Reviewed it brings us to 1,955,012 results.
ProQuest Continued:
1,955,012 is still very big. So let us narrow it down some more by finding different key words.

Click on Microbiology AND Immunology. It will narrow down the search to 82,410. **Notice** that it is not peer reviewed yet.
ProQuest Continued:
Notice with peer reviewed and full text clicked we have 2,432 articles available to search. That is much better than 2,768,259 where we started off at.
If the 2,432 is still too much, you can narrow the search down by decade and year.

With narrowing the search to have from 2007 to present we got 975 results. That is better than 2,432.
Discordance among Commercially Available Diagnostics for Latent Tuberculosis Infection

Mancuso, James D; Mazurek, Gerald H; Tribble, David; Olsen, Cara; Aronson, Naomi; E. et al. American Journal of Respiratory and Critical Care Medicine 185. 4 (Feb 15, 2012): 427-34.

Abstract (summary)

There is uncertainty regarding how to interpret discordance between tests for latent tuberculosis infection.

The objective of this study was to assess discordance between commercially available tests for latent tuberculosis in a low-prevalence population, including the impact of nontuberculous mycobacteria.

This was a cross-sectional comparison study among 2,017 military recruits at Fort Jackson, South Carolina, from April to June 2009. Several tests were performed simultaneously with a risk factor questionnaire, including (1) QuantiFERON-TB Gold In-Tube test, (2) T-SPOT.TB test, (3) tuberculin skin test, and (4) Battey skin test using 5 tuberculin units of PPD.
